#2, 20148 – 102nd Ave, Langley, B.C., Canada, V1M 4B4, 604-882-8422, Fax: 604-882-8466 ([www.cdnlabs.com](http://www.cdnlabs.com))

## REFERENCE MATERIAL: CDN-ME-1806

Recommended values and the “Between Lab” Two Standard Deviations

Gold	3.425 gpt	± 0.240 gpt	30 g FA, instrumental	Certified value
Silver	365 ppm	± 20 ppm	30 g FA, gravimetric	Certified value
Silver	371 ppm	± 10 ppm	4-Acid / ICP	Certified value
Silver	371 ppm	± 13 ppm	Aqua Regia / ICP or MS	Certified value
Copper	0.215 %	± 0.008 %	4 Acid / ICP	Certified value
Copper	0.215 %	± 0.008 %	Aqua Regia / ICP or MS	Certified value
Lead	5.89 %	± 0.27 %	4 Acid / ICP	Certified value
Lead	5.83 %	± 0.15 %	Aqua Regia / ICP or MS	Certified value
Zinc	14.00 %	± 0.42 %	4 Acid / ICP	Certified value
Zinc	13.83 %	± 0.57 %	Aqua Regia / ICP or MS	Certified value
Iron	17.57 %	± 0.54 %	4 Acid / ICP	Certified value
Iron	17.64 %	± 0.60 %	Aqua Regia / ICP or MS	Certified value

**Note 1:** Standards with an RSD of near or less than 5% are certified; RSD's of between 5% and 15% are Provisional; RSD's over 15% are Indicated. Provisional and Indicated values cannot be used to monitor accuracy with a high degree of certainty.

**Note 2:** Standard CDN-ME-1806 is a high sulphide sample and has been pre-packaged in kraft bags which have been individually vacuum-sealed in nylon bags in either 60g or 100g quantities. It is available for purchase in lots of either 10 x 60g or 10 x 100g. High sulphide samples will stay valid indefinitely while vacuum sealed and should stay that way until the lab is ready to analyse the standard. After opening we cannot guarantee their accuracy for any length of time but resealing and storing in a cold dark place should reduce the oxidation rate.

**PREPARED BY:**

CDN Resource Laboratories Ltd.

**CERTIFIED BY:**

Duncan Sanderson, B.Sc., Licensed Assayer of British Columbia

**INDEPENDENT GEOCHEMIST:**

Dr. Barry Smee., Ph.D., P. Geo.

**DATE OF CERTIFICATION:**

June 22, 2018

**ORIGIN OF REFERENCE MATERIAL:**

Standard CDN-ME-1806 was prepared from ore received from Hecla Mining's Greens Creek deposit. The Greens Creek deposit is a polymetallic, stratiform, massive sulfide deposit. The host rock consists of predominantly marine sedimentary, and mafic to ultramafic volcanic and plutonic rocks, which have been subjected to multiple periods of deformation. Mineralization occurs discontinuously along the contact between a structural hanging wall of quartz mica carbonate phyllites, and a structural footwall of graphitic and calcareous argillite.

Ore lithologies fall into two broad groups: massive ores with over 50% sulfides and white ores with less than 50% sulfides. The massive ores are further subdivided as either being base-metal or pyrite dominant. Massive ores vary greatly in precious-metal grade from uneconomic to bonanza Au (>.5 opt) and Ag (>100 opt). White ores are subdivided into three groups by the dominant gangue mineralogy; white carbonate, white siliceous, and white baritic ore. These ores tend to be base-metal poor and precious-metal rich. Major sulfide minerals are pyrite, sphalerite, galena, and tetrahedrite/tennantite.

## **METHOD OF PREPARATION:**

Reject ore material was dried, crushed, pulverized and then passed through a 270-mesh screen. The +270 material was discarded. The -270 material was mixed for 5 days in a double-cone mixer. Splits were taken and sent to 15 commercial laboratories for round robin assaying.

## **Approximate chemical composition (from whole rock analysis) is as follows:**

	Percent		Percent
SiO <sub>2</sub>	2.1	Na <sub>2</sub> O	<0.01
Al <sub>2</sub> O <sub>3</sub>	0.5	MgO	6.1
Fe <sub>2</sub> O <sub>3</sub>	25.0	K <sub>2</sub> O	0.1
CaO	10.0	TiO <sub>2</sub>	<0.1
MnO	0.4	LOI	16.8
S	27.6	C	4.7

## **Statistical Procedures:**

The final limits were calculated after first determining if all data was compatible within a spread normally expected for similar analytical methods done by reputable laboratories. Data from any one laboratory was removed from further calculations when the mean of all analyses from that laboratory failed a t test of the global means of the other laboratories. The means and standard deviations were calculated using all remaining data. Any analysis that fell outside of the mean  $\pm 2$  standard deviations was removed from the ensuing data base. The mean and standard deviations were again calculated using the remaining data. This method is different from that used by Government agencies in that the actual "between-laboratory" standard deviation is used in the calculations. This produces upper and lower limits that reflect actual individual analyses rather than a grouped set of analyses. The limits can therefore be used to monitor accuracy from individual analyses, unlike the Confidence Limits published on other standards.

## **Assay Procedures:**

**Au:** 30 gr. fire assay pre-concentration, AA or ICP finish.

**Ag:** 30 gr. fire assay pre-concentration, gravimetric finish.

**Ag, Cu, Pb, Zn, Fe:** 4-acid digestion, AA or ICP finish and Aqua regia digestion and ICP-OES or MS finish.

## **Results from round-robin assaying:**

**Notes:**

- Labs 6,8 and 15 did not report Ag assayed by fire assay with gravimetric finish.
- Lab 7 did not report Ag assayed by using Aqua Regia and 4 Acid digestion with instrumental finish methods.
- Lab 7 did not report Cu, Pb, Zn and Fe assayed by using Aqua Regia digestion with instrumental finish method.
- Labs 9 did not report Cu, Pb, Zn and Fe assayed by using Aqua Regia digestion with instrumental finish method.
- Pb values assayed by utilizing 4 Acid and aqua regia digestion methods were higher than Lab 10 and 8 detection limits.
- Ag results assayed by utilizing 4 Acid digestion method from Lab 12 were removed for failing the t test.
- Ag results assayed by utilizing Aqua Regia digestion method from Lab 9 were removed for failing the t test.
- Ag results assayed by utilizing Fire Assay/gravimetric finish method from Lab 2 and 11 were removed for failing the t test.
- Cu results assayed by utilizing 4 Acid and Aqua Regia digestion methods from Lab 12 were removed for failing the t test.
- Pb results assayed by utilizing Aqua Regia digestion method from Lab 9 were removed for failing the t test.
- Zn results assayed by utilizing 4 Acid digestion method from Lab 6 and 11 were removed for failing the t test.
- Fe results assayed by utilizing 4 Acid and Aqua Regia digestion methods from Lab 12 were removed for failing the t test.

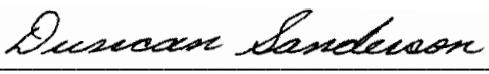

**Participating Laboratories:** (not in same order as table of assays)

Activation Laboratories, Ancaster, Ontario, Canada	Bureau Veritas, Vancouver, BC, Canada
Activation Laboratories, Thunder Bay, Ontario, Canada	Certimin S.A., Lima, Peru
ALS Canada, North Vancouver, BC, Canada	MS Analytical, Langley, BC, Canada
ALS, Loughrea, Ireland	SGS, Vancouver, BC, Canada
ALS, Lima, Peru	SGS, Lima, Peru
ALS, Perth Australia	SGS, Lakefield, Ontario, Canada
Bureau Veritas, Perth, Australia	TSL Laboratories Ltd., Saskatoon, SK, Canada
Skyline Assayers & Laboratories, AZ, USA
