

CDN Resource Laboratories Ltd.

#2, 20148 – 102nd Ave, Langley, B.C., Canada, V1M 4B4, 604-882-8422, Fax: 604-882-8466 (www.cdnlabs.com)

REFERENCE MATERIAL: CDN-ME-1607

Recommended values and the “Between Lab” Two Standard Deviations

Gold	3.33 g/t	± 0.27 g/t	30 g FA, instrumental	Certified value
Silver	150 ppm	± 5 ppm	4-Acid / ICP	Certified value
Copper	0.310 %	± 0.008 %	4 Acid / ICP	Certified value
Lead	1.72 %	± 0.06 %	4 Acid / ICP	Certified value
Zinc	0.56 %	± 0.02 %	4 Acid / ICP	Certified value

Note: Standards with an RSD of near or less than 5% are certified; RSD's of between 5% and 15% are Provisional; RSD's over 15% are Indicated. Provisional and Indicated values cannot be used to monitor accuracy with a high degree of certainty.

PREPARED BY:

CDN Resource Laboratories Ltd.

CERTIFIED BY:

Duncan Sanderson, B.Sc., Licensed Assayer of British Columbia

INDEPENDENT GEOCHEMIST:

Dr. Barry Smee., Ph.D., P. Geo.

DATE OF CERTIFICATION:

July 26, 2017

ORIGIN OF REFERENCE MATERIAL:

Standard CDN-ME-1605 was prepared by combining a variety of low and high-grade ores.

METHOD OF PREPARATION:

Reject ore material was dried, crushed, pulverized and then passed through a 270-mesh screen. The +270 material was discarded. The -270 material was mixed for 5 days in a double-cone mixer. Splits were taken and sent to 15 commercial laboratories for round robin assaying.

Approximate chemical composition (from whole rock analysis) is as follows:

	Percent		Percent
SiO ₂	60.6	Na ₂ O	0.3
Al ₂ O ₃	7.2	MgO	5.1
Fe ₂ O ₃	12.9	K ₂ O	0.6
CaO	1.9	TiO ₂	0.3
MnO	0.1	LOI	7.8
S	6.3	C	0.7

Statistical Procedures:

The final limits were calculated after first determining if all data was compatible within a spread normally expected for similar analytical methods done by reputable laboratories. Data from any one laboratory was removed from further calculations when the mean of all analyses from that laboratory failed a t test of the global means of the other laboratories. The means and standard deviations were calculated using all remaining data. Any analysis that fell outside

of the mean ± 2 standard deviations was removed from the ensuing data base. The mean and standard deviations were again calculated using the remaining data. This method is different from that used by Government agencies in that the actual "between-laboratory" standard deviation is used in the calculations. This produces upper and lower limits that reflect actual individual analyses rather than a grouped set of analyses. The limits can therefore be used to monitor accuracy from individual analyses, unlike the Confidence Limits published on other standards.

Assay Procedures:

Au: Fire assay pre-concentration, AA or ICP finish.

Ag, Cu, Pb, Zn: 4-acid digestion, AA or ICP finish.

Results from round-robin assaying:
